

[Science Gallery Dublin](#) has welcomed more than 2 million visitors since opening its doors in 2008, with visitors exploring over 36 exhibitions ranging from music and the body to genetic modification, from memory to gaming, from NASA surveillance and security to the future of food, from statistics to oscillations, from the periodic table to synthetic biology. Now Science Gallery Dublin wants to welcome you and your class through its doors. With upcoming exhibitions linking into Junior Cycle and Senior Cycle curriculum content and exploring future facing STEM themes in an innovative and engaging way, a visit to Science Gallery provides students with an inspiring opportunity to explore what happens when art and science collide. All of Science Gallery Dublin's exhibitions are temporary and will only be here for a few months so don't miss the chance for your school to see the exhibitions running this year.

*"It was something I got really involved in, and something everyone could get involved in." - 5th year biology student, Salerno Secondary School, Galway*

We are conscious that for many schools a visit to Science Gallery Dublin is difficult or not at all possible for a variety of reasons, including provision of transport and the cost of the excursion. With the generous support of the [Google Field Trip Days Programme](#), Science Gallery Dublin is in a position to offer second level schools in Ireland a free visit to Science Gallery Dublin to experience one of our exhibitions in 2016.
