Student2Scientist

Science Teacher workshops open to ISTA members

Are you a science teacher in an all-girls school looking for a way to bring textbook science to life?

This might be just the thing for you. This summer, we are offering you a chance to partake in a free teacher development workshop that will help to train you to use computer science as a teaching tool.

At the end of this one day workshop you will be able to create computer simulations to visualise scientific concepts. These simulations will be readily available on the Student2Scientist online portal for easy use in science classrooms across Ireland.

Workshop Dates: 27th June, 16th July or 13th August

Workshop Location: Trinity College Dublin

To sign up and for more information, please visit our website at **student2scientist.org**

This initiative is kindly funded by: Google CS4HS project.
